CMMI® VIRTUAL | Battlecard

Value Proposition

Helps organizations develop the skills necessary to understand best practices, tools, and techniques for virtual business environments to maximize effectiveness and efficiency.

Target Audience

Organizations that want to maximize effectiveness and efficiency in virtual business environments.

Audience Pain Points:

- Exposure to vulnerabilities
- Operational disruptions

Key Benefits

- Identify and decrease exposure to vulnerabilities
- Plan ahead for operational disruptions
- Improve operational efficiencies

Relation to Government Mandates, Standards and Methodologies

- CMMI Virtual is unique in this space

Practice Areas

- **Enabling Virtual Work:** Maximizes delivery effectiveness and efficiency while reducing the impact and expense from travel and in-person activities.

Differentiators

- With its open architecture, CMMI not only works well and easily integrates with other standards and frameworks, it enables them to be more useful and effective for building capability and improving performance

- The CMMI has been and continues to be applicable to a broad range of organizations, domains, technologies, or contexts.

Why Adopt Multiple Domains?

- Multiple domains in a single appraisal event will yield cost and resource savings.

- Provides the opportunity to look beyond a single domain to where there is overlap in the Organizational Unit's (OUs) processes to add continuous improvement value and identify the opportunity for further process integration.

- Enables appraisal teams to more easily understand and see how processes are performed in the OUs, projects, and organizational support functions (OSFs).

- Model scope with multiple domains reflect how work is performed across industries, geographies and OUs.
